

## COMP3512 Lab/Chapter 9 Instructions

This lab will provide you with more experience using JavaScript. If you are running this lab locally, then you will need to download the files from this lab's GitHub folder. You can do this by downloading a zip from GitHub, or by cloning the repo using Git.

- 1) Using a web browser, visit <https://github.com/mru-comp3512-archive/w2021-chapter09>.
  - a) If downloading, then click on Download button and download the zip. You can uncompress it someplace and continue with the lab.
  - b) If you have installed using Git locally on your computer, then create a folder for your lab, then in the Terminal (Mac) or Git Shell / Command Window (PC), use the following commands:

```
git init
```

```
git clone https://github.com/mru-comp3512-archive/w2021-chapter09.git
```

- 2) Once everything is ready, you will find a step-by-step lab (see **lab09-3rd.pdf**). I strongly recommend you work your way through each exercise in this lab!

In this lab, you will find several *Test Your Knowledge* sections. Have these labs completed by Friday February 5.

Marking remote labs is time consuming, and it takes time to mark everyone during office hours or before/after tutorials/lectures. So, I'm willing to mark labs +/- week. Don't let this fool you into thinking you can finish labs a week late, as doing so will only get you quite behind in the course.

**Please don't skip the other walkthrough exercises and simply complete the *Test Your Knowledge* sections.** The other walkthrough exercises are there to teach you different aspects of JavaScript, and you won't learn them by skipping over them.
